

HelloMovie

The place to find Movie & TV recommendations and where to watch them.

HelloMovie

The Pitch

- Free text search for a movie or TV show
- Display Top Ten results
- Display the details of your selection
- Display recommendations from your selection
- Display where you can watch your selection

HelloMovie

The Concept

Description

Our application helps recommend a movie or TV show based on free text search

Motivation for Development

We had the idea after spending more time searching for something watch than actually watching

User Story

As an avid movie fan I want to spend less time searching for something different to watch and where to watch it, so that I can expand my movie experiences

HelloMovie

The Process

Technologies

Node, React, Axios, OMDb, IMDb, Streaming Availability, TMDb, MDB-React-ui-kit, AOS, Movie-trailer

Tasks & Roles

Grant, Jason & Jack explain what part we played.

Challenges

GitHub (but not as much as the 1st project), Accessing the APIs, Passing data between components.

Successes

Working together, helping each other out and communication.

HelloMovie

The Demo

HelloMovie

The Future

- Save Favourites for quicker look ups
- More refinement in the recommendations algorithm
- Dynamic Search bar population
- Improved UI

HelloMovie

Where Check It Out

- HelloMovie is deployed at:

<https://hellomovie.netlify.app>

- The GitHub repo is at:

[Computastar/HelloMovie: Movie recommendation application \(github.com\)](https://github.com/Computastar/HelloMovie)
